By the end of the session, the learners should be able to:

1. Describe the clinical presentation and risk factors associated with various disease states
2. Describe the mechanism of action, clinical use, contraindications, adverse reactions, and clinically significant drug interactions of various drug classes
3. Design a patient-centered, evidence-based therapeutic regimen for a patient
4. Identify appropriate monitoring parameters when initiating or modifying pharmacotherapy
5. Identify clients who need a higher level of care and refer accordingly
