What you should know about the... nicotine inhaler

Nicotine inhaler is a safe method to reduce cravings for cigarettes when used as directed. The inhaler has been approved by the Federal Drug Administration (FDA) to be sold (with a prescription). Nicotine inhaler does not cause cancer or heart attacks, but smoking cigarettes does. The chemicals in cigarettes and cigarette smoke are what cause cancer, not the nicotine. Instead of inhaling hundreds of toxic chemicals when you smoke cigarettes, you will only be getting small amounts of nicotine through the back of your mouth when you use the inhaler. It does not go to your lungs.

How do I use nicotine inhaler???

Before using nicotine inhaler read all of the instructions carefully. If you have any questions, talk to your health care provider.

- Start the morning of your quit day, as soon as you wake up.
- Don’t eat or drink 15 minutes before using nicotine inhaler or while using the inhaler (food or drink can keep you from absorbing the nicotine). If you have eaten within 15 minutes, rinse your mouth out with water before using the inhaler.
- Pull apart the two parts of the plastic inhaler and put in the cartridge. Push the two parts of the inhaler together to pierce the seal on both ends of the cartridge.
- Put the inhaler mouthpiece in your mouth. Gently suck air into your mouth through the inhaler. Suck lightly to get the nicotine into your body. Hold the vapor for a few seconds before breathing out. Suck or puff on the inhaler a few times a minute. Then stop and use it again later. You may cough the first few times. Each cartridge lasts for 20 minutes of puffing.
- Wash the mouthpiece with soap and water regularly. Replace the cartridge when you stop feeling the peppery flavor or slight burning in your throat or when the cartridge seems to have stopped working.
- There is no minimum dose but 6 cartridges a day is the average daily use when used without other tobacco treatment medications like the patch. Sixteen cartridges per day is the maximum dose. Don’t use more without checking with your health care provider. Store at room temperature away from light.
- After a month or 2 of not smoking, and after talking to your health provider, you may start to slowly cut down the number of cartridges per day. Some people prefer to stop using the inhaler in certain places or at certain times. Others suck on it fewer times each use. Work with your provider to figure out what will work best for you.
- Carry the inhaler where you used to carry your cigarettes. Carry the inhaler for 3-12 months so you can use it if you have a major craving, urge to smoke, or are under extreme stress.
- Avoid using the inhaler outside where it is cold. The medicine works best at room temperature.

Be prepared !!!

- Get the inhaler while you are getting ready to quit—before your quit day. Get more before you run out.
- Nicotine inhaler won’t give you the same feeling as cigarettes, as it takes several minutes for the nicotine to get in your blood. Instead, nicotine inhaler will reduce your cravings and keep you comfortable while you learn other things to do instead of smoking.
- It can help with your pattern of putting something from hand to mouth.

Take good care of yourself!

- deep breathing
- breaks
- music
- asking for help and support
